

K & G MANUFACTURING CO.

Dear Sirs,

Please review our company information and distribute to your people whom you feel could benefit knowing about our services. As one of the better production precision machine shops, we would welcome the opportunity to give you a competitive bid on your next machining requirements.

We have a selection of high-speed CNC mills, CNC lathes, manual machines and secondary operational equipment to handle most your requirements. Primary materials are aluminum and steel, as well as stainless, ductile, castings, forgings, tool steel and plastic. Our markets include: aerospace, medical, computer, marine and defense.

K&G can handle most close tolerance, small to midsize complex parts up to 39" and turned diameters up to 12" with value-added services such as: design assistance, material procurement, deburring, cleaning, saw cutting, and assembly.

From initial hogouts of prototypes to the machining of castings into final production units, we have the ability to meet the specifications and tolerances you require. It takes special capabilities to produce mission-critical components and we know how to bring these projects to their successful conclusion.

If you have any complex machining requirements that need to be accompanied with orderly quality inspection documents, please call K&G. I would be more than happy to send you some references to contact, if needed.

Should you have any questions before then, please do not hesitate to call and feel free to visit us anytime.

Sincerely,

Mike Kraimer
Sales & Marketing Manager
